“Solar Pool Heating”

Swim all year with our
Solar Pool Heating System

Intelli-Swim

Overview

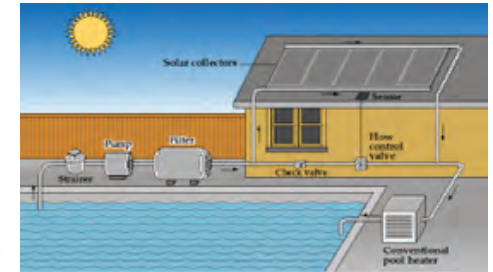

Besides the air conditioner, your pool pump uses more energy than any other appliance in your home. You can reduce pool heating costs significantly by installing a solar pool heater which have very low annual operating costs. In fact, solar pool heating is the most cost-effective use of solar energy in many climates. IntelliSwim solar pool heaters allow you to save money and swim longer while reducing your energy costs.

How does it work?

Solar Collectors efficiently absorb the sun's heat by transferring that energy to the water that is pumped through them. The manual control turns pool heating on or off as desired. The pump and filter circulates clean water through the pool and collector. The check valve prevents backflow circulation in the solar collectors at night and allows for proper drainage. The collector hoses join the solar collectors together then connect the supply and return piping to the collector array. Finally, using long mounting straps we secure the solar collectors to the roof.

Swim Longer: Installing a solar pool heater will increase, or sometimes double, the amount of time your pool can be comfortably used during the year.

Hurricane Tested: Our system's panels can withstand hurricane force winds.

Extremely Economical: When compared to heating your pool with other methods, solar heating can pay for itself in under 3 years.

Environmentally Safe: Solar Pool heaters use the sun's energy to provide a clean alternative to conventional heating sources that pollute the environment.

Maintenance Free: Now you can relax in your heated pool without any additional maintenance or cost involved.

Lifetime Warranty: Intelliswim Products are backed by a comprehensive 10 Year Limited Lifetime Warranty to ensure years of enjoyment.
